

Future of Mobility: Electrification in MaaS

Gepubliceerd 11-feb-21 08:00 door [Caroline De Cristofaro](#)

The convergence of emerging technologies combined with changing consumer and societal preferences has resulted in the rapid adoption of Mobility-as-a-Service also known as MaaS; getting users from point A to B in a flexible, multimodal, and seamless way through a single interface. Recent collaborations have also seen the integration of eco-friendly transportation modes into MaaS. In this episode, we discuss the possibilities of electrification in MaaS.

"MaaS is the future, it will be electric, and the charging infrastructure is a very important pre-condition that it works. And that's exactly where we are."

Helmut Rebstock - Co-founder, TGOOD Group
