

ICE businesses: Navigating the energy-transition trend within mobility

Gepubliceerd 18-mrt-22 10:00 door [Editor dmi](#)

Electric vehicles are gaining market share, but ICE-component suppliers can still create significant value while advancing sustainability.

A momentous shift is occurring within the mobility sector as sustainability concerns accelerate and the internal combustion engine (ICE) begins to lose market dominance. Along the ICE value chain, suppliers may soon reach a pivotal moment when growth first plateaus and then declines. Although the transition to electric vehicles (EVs) is already under way, ICE suppliers can still find many value-creation options over the short and medium term, especially if they draw inspiration from companies in other industries that have successfully navigated similar disruptions.
